ECOSENSE® LAUNCHES THE MOST EFFICIENT EXTERIOR LED LINEAR AND PIONEERS ANOTHER DIMMING CONTROL TECHNOLOGY

EcoSpec® Linear HP EXT now offers the best efficacy rating for an exterior LED linear on the market today and the LDCM-PL extends the EcoSense product line

Los Angeles, CA, - August 12, 2014 — [EcoSense](#), a fast-growing manufacturer of high-performance LED technologies, announces new product solutions in response to customer demands and market requirements: the new, dimmable Linear HP EXT (HPE) with the best efficacy available for exterior applications; the new Linear HP EXT Conduit Connection (HPE-CC) for stringent code compliance; and the pioneering Linear Dimming Control Module in a Plenum Rated (LDCM-PL) option for specialty codes. These products, unlike any other, exceed the most exacting specifications in the lighting market.

EcoSpec Linear HP EXT (HPE) — this new line-voltage, white LED luminaire offers the best efficacy rating in its class (75lm/W at 4000K). It is a high-output, low-profile exterior solution that excels in architectural applications where durability is imperative. The HPE is designed with a durable glass lens and GORE® Vent to provide the ultimate protection against nature, chemicals and moisture build-up. This robust aluminum-framed luminaire features the breakthrough, flicker-free dimming down to zero percent, made possible with Electronic Low Voltage (ELV) power-on-board technology exclusively by EcoSense. The HPE is now also available in reduced wattage and lower lumen package options for any application with strict energy consumption requirements.

EcoSpec Linear HP EXT - Conduit Connection (HPE-CC) — all the unique attributes of the new Linear HP EXT luminaire with a game-changing conduit connection option, eliminating cords and connectors to create a robust electrical connection for extreme weather conditions. The novel conduit connection option meets building code restrictions where other products simply cannot compete. The HPE-CC features reduced-wattage versions and is available with male and female connector options for the ultimate flexibility.

EcoSpec Linear Dimming Control Module, Plenum Rated (LDCM-PL) — EcoSense pioneers another new technology with the first of its kind, LDCM-PL. Now in plenum rated option, the LDCM-PL is an extension to the LDCM product family. This unique module converts ordinary 0-10V signals with a fixed-line voltage input into an ELV-dimmed output for the smoothest, flicker-free dimming when used with EcoSense products. It is approved for direct mounting to a junction box in plenums for easier installation and meets local building codes, expanding the EcoSense product line to a wider array of spaces and project types.

EcoSense products are designed by lighting designers for lighting designers, in order to meet critical aesthetic and performance criteria. “Our passion is to constantly exceed customer demands with market-driven innovations and new technologies.” says Mark Reynoso, CEO of EcoSense. “These new introductions exceed the specifications of an ever-changing LED landscape, affirming our leadership position in the space.”

About EcoSense

Founded by a team of long-serving industry experts with proven know-how in the development and best practices of solid-state illumination, EcoSense provides best-in-class LED lighting solutions for use in commercial and architectural applications. The company offers a comprehensive line of high-performance LED fixtures that meet the technical requirements of the most demanding projects while delivering substantial benefits over traditional lighting sources. EcoSense was established in 2008, is privately held and has received numerous accolades including two LUX Awards, three Product Innovation Awards (PIA), a Next Generation Lighting (NGL) Award and an Infiniti Award.
